

QMotion UV Light Protection

UV light is a natural cast from the sun, but its aggressive rays need moderation in our living spaces to protect our well-being and our furnishings. QMotion Advanced Shading Systems offers a range of solutions which are also decorative and flexible.

- Select from a range of light filtering screen fabrics. Available in openness factors from 1-10%, these will block anywhere from 90-99% of the entering UV light.
- For greater UV control, choose from among the many QMotion “blackout” roller shade fabrics. While the fabric is darkening the room, it is also blocking 100% of the light from passing through the fabric.
- Add Side Channels to “blackout” fabric for a more complete UV and visible light solution. When combined with a fascia, little or no light can pass, thus blocking nearly all UV light from entering our spaces.

Using shading as part of a UV management program is efficient and simple with QMotion

Protect furnishings, including valuable art, with the range of attractive UV light protecting products from QMotion Advanced Shading Systems.
